

Fire Safety Management

Managing fire risk: protecting business and the community

Minimising fire risk is the primary responsibility of the Fire Service. Enshrined in legislation, this demands the most modern processes and tools to protect people and property on a daily basis. Atkins supplies and supports FARYNOR™ to help the Fire Service in the delivery of these essential services, achieving real cost savings within the first two years.

Maximise return, minimise risk

In the current financial climate scarce resource must be targeted effectively to maximise productivity so that fire risk can be minimised. Atkins' FARYNOR™ solution has been proven to do just that, ensuring:

Compliance

With legislation and confidence in statutory reporting requirements

Increased Productivity

Through improved planning and mobile working

Flexibility

Accommodating changes in legislation and your operating procedures

Efficiency

Enforcing best practice, automatic risk and re-inspection date calculations

Timeliness

Delivering key risk data to those who need it at the point of decision

A complete end-to-end solution, FARYNOR™ delivers:

Integration – giving a central view of all relevant data

- Gazetteer – for consistent, trusted property data
- Control – accurate fire safety data at mobilisation and attendance
- Document Store – easy access to electronic fire safety files
- Staff Data – utilise current, up to date staff information saving errors

Mobility – delivering capability where it is needed

- Inspecting Officers – mobile management and delivery of work plan
- Firefighters – delivery of key risk data when attending incidents

Low impact on existing systems, more savings

Web based

All the user needs is a standard browser

Modern technology

Easy to integrate with other business systems

Easy to maintain

In house or can be hosted externally

“Atkins continues to support the development of FARYNOR™ with the design, build and delivery of the new mobile working solution. I was impressed by their **commitment** to making the Mobile working solution a flexible **high quality** product that will enable the London Fire Brigade to implement the Fire Safety Order, making London a safer place. Their ability to focus on the customer, developing a **close working relationship** with the project team, has ensured that the Practitioners have received a solution that has met their expectations.”

Terrie Gobind-Crooks, London Fire Brigade

Comprehensive Features

Locations

Occupiers, property use, risk; NLPG-compliant

Mobile Working

Data capture at the audit via intelligent, electronic forms

Staff

Automatic feed from corporate system; roles, qualifications etc

Management Information

Comprehensive report set; automatic IRMP(FS) Return

Electronic Fire Safety Files

Link to document store when managing inspections

System Administration

Adapt to changing work practices

Integration

Control, in-cab mobile data terminals

Legislative Fire Safety

Plan all inspections and outcomes, eg enforcements

Home Fire Safety

From referral to inspection and intervention

Operational Risk Assessment

Of high risk locations, including Hazard Information Card

Schools Team

Planned, educational visits to primary schools

Junior Firesetters

Plan/record visits plus other stakeholder details

Other CFS

Manage all other community fire safety activities

Petroleum

Inspection of petroleum-related properties and locations

Case Studies

London Fire Brigade

Atkins worked in partnership with London Fire Brigade, creating a modern fire safety management system to address the demands of the Regulatory Reform Order.

We created a solution that places risk at the heart of the inspection process. Flexible workflows, at the control of the customer were built-in to future proof against changing work practices.

Legislative fire safety, petroleum, schools team and junior firesetters are managed centrally using FARYNOR™.

Mobile working and electronic fire safety files now improve efficiency and management leading to faster update of such a large property estate.

North Wales Fire & Rescue Service

North Wales' vision was for a complete records management system providing a single repository of fire safety data.

Atkins extended the FARYNOR™ solution to support additional activities (home fire safety checks, operational risk assessments) and integrate with other key FRS applications (Control, Gazetteer, in-cab MDTs).

The objective of making fire risk data available at the point of real need was successfully achieved in parallel with the role out of in-cab MDTs.

Mobile working for home fire safety checks has recently been implemented introducing even more savings.
